Our services:

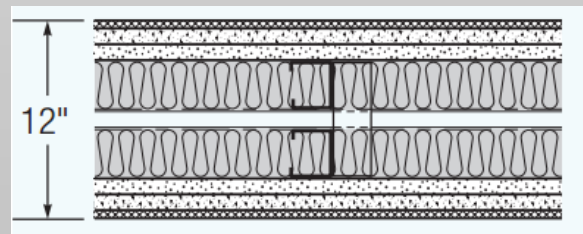

Since our inception in 1983, Waterdon has prided it's self on the provision of specialty trade services. This unique approach is exemplified in every facet of our Physical Security Services. Combining years of field experience in the installation of interior systems and years of investment in security clearances has resulted in the successful completion of many security and acoustic projects. Waterdon is often involved at the outset, working with stakeholders to design spaces and assemblies to meet their requirements. Our familiarity with industry standards and Canadian Government/International standards in the actual physical construction of STC/RF/BR/BL spaces makes us a valuable member of your construction team. Our experienced in-house trades give you the peace of mind that your space will pass the test.
